Gardening heavenBy CustomerI love this book because it is extremely detailed in the world of gardening, I've always wanted to do some greenhouse gardening or just general gardening to be honest. I've read a little bit of this book and can already tell it is packed with information, it is also very well organised with good punctuation and hardly any spelling mistakes. So far I've been reading this book and have yet to actually start but from reading it I have gained some very good information and I am very interested in greenhouse gardening from the advantages listed, it also goes in depth about other things you may need like the construction etc; won't spoil the book too much but if you are looking for something that covers nearly everything about greenhouse gardening then this is definitely the book for you. 0 of 0 people found the following review helpful. The real greenhouse guide for beginners; definitely a 5-star for Gardening Box Set #3. By Teddy Ochieng Building a green house has never been easy, especially when you are a novice trying to make your home's garden look great with green plants. Gardening Box Set #3 has given me an insight towards building a perfect greenhouse for myself. I have an idea first of all what to consider before setting up a greenhouse, what plants to cultivate during either the cold or warm season. I have an idea why planting my "vegies" in the greenhouse is perfect for me and the vegetables themselves. I'll give it a 5-star rating because of the simplicity used in writing. 0 of 0 people found the following review helpful. Box set is a rich source of information for anyone interested in gardening. By JazzMan This box set includes two books: Greenhouse Gardening for Beginners and Vegetable Gardening for Beginners. Greenhouse Gardening for Beginners is laid out in six chapters. Chapter 1 discusses the history of Greenhouse gardening, Chapters 2-3 discusses the reasons for growing in Greenhouse and how to build a greenhouse. Chapter 4 provides an overview of preparing for growing season while chapters 5-6 discusses planting in cold and warm weather. I found this rich source of information for doing greenhouse gardening. I found the chapter about growing in cold weather specially informative.

Gardening Box Set #3: Greenhouse Gardening for Beginners (How to Grow Flowers and Vegetables Year-Round In Your Greenhouse) The Ultimate Guide to Vegetable Gardening for Beginners: How to Grow Your Own Healthy Organic Vegetables All Year Round! GREAT BOOK SET AVAILABLE 2 FOR THE PRICE OF 1! Greenhouse: A greenhouse allows you to plant all year round- This is the most compelling reason why gardening enthusiasts make use of greenhouses. Whether you are a breeder, a farmer, or a hobbyist, you'll love to have the chance to enjoy gardening 24/7. Unfortunately, the fact is that you can't do exactly that on a lot of places in the world. A greenhouse provides you with the opportunity to grow your plants indoors while weather conditions outside are less than ideal. With the ability to change up conditions inside the greenhouse, you can grow particular plants there in any part of the year. It allows you to control environmental conditions- For most gardening enthusiasts, this is the biggest reason why they go for greenhouses to begin with. On the great outdoors, it's virtually up to your plants to take whatever Mother Nature has to dish out. In terms of survival odds, that is not exactly the most ideal scenario. This is where the greenhouse comes into the picture. You can control some of the most basic environmental parameters such as temperature, soil moisture, light exposure, and humidity inside the greenhouse. Some modern forms of these buildings provide the gardener total control of all external factors that affect plant growth. Topics Covered... A Short History of the Greenhouse Why Grow Plants in a Greenhouse? How to Build Your Greenhouse Preparing for Growing Season Planting in Cold Weather Planting in Warm Weather Much, much more! Vegetable: This eBook will concentrate on specific vegetables that are easy to grow and are favorites in most cook books. The author would like to stress the importance of growing the right type and mix of veggies. This way you get a better crop, and useful veggies that usually go hand in hand with each other. Don't try to do too much too soon. Don't try to start planting when it's too cold outside. The lowest soil temperature for planting is 40 degrees Fahrenheit. The best soil temperature is around 50 degrees to 60 degrees. Every successful farmer/gardener has a mentality that considers nature first, before spur of the moment decisions. As an added bonus, planting veggies will turn you into a very observant person. Topics Covered...
